

Hands on AI

Step-By-Step User Guide for Hand Gestures Recognition

Project:

- ***How to Use:***

1. Power On:

- Connect the ESP32-CAM system to the power source.
- Wait for the system to initialize (indicated by a stable LED)

2. Make a Prediction:

- Position your hand in front of the camera.
- Show the ASL sign for either "A" or "B":
 - Sign "A": The green LED will light up.
 - Sign "B": The red LED will light up.

3. Adjust Position:

- Ensure your hand is well-lit and fully visible in the camera feed for accurate predictions.

Important Notes:

- Keep your hand steady and within the camera's field of view.
- Use a good environment for best results.

Problems That Might Happen:

- No LED Lights Up: Reposition your hand and ensure it's visible in the camera feed.
- Incorrect Prediction: Ensure your hand gesture matches the ASL sign for "A" or "B" clearly.
